

Card validation checklist

Owner review of **published, owned cards** whose image, printing, or placement still needs checking. Unchecked entries are questions, not evidence of a mistake. This checklist does not change the public collection or establish an in-hand confirmation.

English names and recorded card numbers are provided to help locate the physical copy. A number taken only from a Holding display name is flagged for verification; vintage No.xxx can be a printed Pokédex number rather than a collector number. 'Not recorded' is not a new identification. For each card, compare the **physical copy** with its gallery image and recorded identity: printed name/language, set and number, edition/stamp/foil or finish, and actual page/pocket when noted. Record the corrected printing, a photo or source reference, the verification date, and whether the current local image is exact. Do not mark an item resolved from a catalogue image alone. Send your completed notes/photos for registry, image, and manifest updates; keep originals archived.

Priority covers non-exact images, uncertain identities, medium/limited Holding readings, and unverified physical placement. **Follow-up** covers registry photo-confidence identities with exact images that have not been independently checked in hand. Holding 'high' alone does not assert whether an in-hand check has or has not occurred, so it is not queued. The two Emolga wanted reference prints are unowned and are not entries here. The provisional Stamped Snivy is queued without an invented page-eight pocket. The five Trade cards remain owned; only their separately recorded availability is authoritative. Use a separate sheet for notes if more room is needed; do not edit this generated checklist to record checks.
